

TEACHING IN THE PRIMARY YEARS Eleni Kyritsis

Award Winning Junior School Administrator Embraces Learning On-The-Go With Device as Flexible And Adaptive As She Is.

Eleni Kyritsis is an award-winning educator and Deputy Head of a junior school based in Melbourne. When not in a classroom, Eleni also develops and shares creative lesson ideas on Instagram as @misskyritsis to enhance teaching and learning around the world.

With a network of more than 16,400 followers on Instagram and a wider industry community engaged via her website, she is very familiar with the challenges and opportunities that 21st century teaching creates.

Understanding that today's lessons are no longer limited to what occurs within the classroom, Eleni works with staff, students and families to design coursework that is engaging, entertaining and enlightening for on premise and remote learning. With flexibility and versatility her key words for meeting the challenges of modern teaching, Eleni needs tech that is just as adaptive as she is.

"My school day begins with whole school administration tasks of daily organisation, teacher replacements, events, sending and replying to emails - all to ensure the school day runs smoothly for all our teachers and students. My role also includes managing the curriculum portfolio, so during the day I work closely with teachers to plan and design units of work and learning experiences for their classes. It's a lot and it's always changing, whether we are on school grounds or remote, so I need to be able to rely on the technology I use."

To keep connected while on the go, Eleni has been using the new ASUS ExpertBook B5 Flip, an education-focused Windows laptop series that has been built for successful teaching and learning outcomes.

"I love using the ASUS B5 Flip each day. I feel it suits my teaching and learning style as it's so lightweight it allows me to move around my school. I don't have a desk in my classroom so I am very often seen walking about and teaching from all corners of the room. The B5 allows me to effortlessly teach from anywhere, and the 360° rotating touch display and lightweight design means it's just carrying a notebook around."

Because an administrator and junior educator wasn't enough, Eleni also teaches DigiTech & Design classes. This combined with her already very mobile and digital role means that Eleni has great insight into how students are using technology in schools and at home as learning tools.

"As well as supporting me through the day, the B5 Flip will make for an extremely well-rounded device for students. The minimalist lightweight chassis and military-grade durability means it can easily go into their school bags and be transported to, from and all around school. The battery life is also great as students will not be required to bring chargers to school each day. Charging 20+ student devices in the classroom can be quite time consuming at the best of times. Like all teachers, lack of time is my biggest pain point during the workday, so to eliminate this tedious task is a big positive."

Leon Brumen, Head of Commercial at ASUS ANZ commented on B5 as the latest device in the ASUS ExpertBook series.

"The ExpertBook B5 was designed to provide the performance, durability, security and versatility that business users in modern workplaces need to get things done and to help drive digital transformation. The expansion of our ExpertBook range affirms our position as a solution provider of solutions to our current and future customers in the commercial sector."

"I definitely recommend this device for both teachers and students. I believe it is a great lightweight computer that gives everyone in the school community the ability to complete all of the digital tasks that will be asked of them, as well as allowing them the flexibility to digital note take and annotate with the touchscreen and stylus."

Leon Brumen, Head of Commercial at ASUS ANZ stated:

"We know teachers are usually pressed for time and have to balance a number of tasks, disciplines and deadlines every day. These ever-growing demands means that they need adaptable and user-friendly devices that fit seamlessly into the classroom, and their lives. With the B5, we've created a powerful yet aesthetic learning and teaching companion."

Available now, the ASUS ExpertBook B5 Flip is built for success with thoughtful and professional design choices. Powered by a 11th Gen Intel® Core™ processor, and featuring AI noise cancellation, dual-SSD RAID support, and ASUS NumberPad 2.0, the B5 is the perfect portable, powerful partner for the business and education sectors.

Final quote from Eleni:

"I absolutely love the B5. I could not ask for anything more in a laptop computer. The ASUS team has really put the needs of teachers and students at the forefront of the B5 design."
